

SIL DECLARATION OF CONFORMITY Model FLT93 SERIES with Surface Mount Components

We, Fluid Components International LLC, located at 1755 La Costa Meadows Drive, San Marcos, California 92078 USA, declare as manufacturer, that the FLT93 Series is suitable for use in a safety instrumented system for SIL 2 as High and Low Flow alarming device and as High and Low level alarming device.

The FLT93 Series has been classified as Type A subsystem according to IEC 61508-1 Chapter 7.4.3.1.2 with a Hardware tolerance (HFT) of 0.

The Failure Modes, Effects and Diagnostic Analysis (FMEDA) report carried out by notified body TUV Nord Cert GmbH, resulted in following failure ratings:

SIL (Safety Integrity Level)	:	2
HFT (Hardware Fault Tolerance)	:	0
Subsystem type	:	А

Failure rates according to IEC 61508-1

Function	SFF	PFD	λ _{DU}	λ_{DD}	λ _{su}	λ_{SD}
Low Level/Flow	84 %	1.43 x 10 ⁻³	326 FIT	178 FIT	1170 FIT	354 FIT
High Level/Flow	82 %	1.63 x 10 ⁻³	371 FIT	116 FIT	1120 FIT	417 FIT

Terminology:

- SFF = Safe Failure fraction
- PFD = Probability of failure on demand
- λ_{DU} = failure rate dangerous undetected faults
- λ_{DD} = failure rate dangerous detected faults
- λ_{SU} = failure rate safe undetected faults
- λ_{SD} = failure rate safe detected faults
- FIT = Failure Rate in 10-9 /hour

Above analysis is based on assuming:

- At a single point in time only one component fails.
- Failure rates are constant, mechanism wear is not included.
- Propagation of failures is not relevant.
- The stress levels are average for the industrial environment.
- External power supply failures are excluded.
- Mis-wired terminals are excluded.
- Set point potentiometers are adjusted according to manufacturer's specification.
- Operation point of the internal " ΔV sig1" is between 0.5 and 7.0 volts.
- Electronics must be in manufacturer's standard enclosures.
- After use of the calibration potentiometer, it is turned to the maximum value to guarantee random switching of the "cal switch" leads to a failsafe state.
- J22 is open.
